CINEMA DSP HD³ with Rear VPS (Virtual Presence Speaker)

Three Yamaha high performance DSPs achieve high speed and large capacity audio signal processing. By using front, centre and surround speakers to create a rear virtual speaker, CINEMA DSP HD³ can produce 11.1 channels even with a 7.1-channel speaker configuration. The total reproduction of spatial data, including the vertical axis, helps create an overwhelmingly realistic sound field.

New CINEMA DSP Programme, Dolby Atmos[®] and DTS:X[™] with CINEMA DSP HD³

This receiver offers the new Enhanced CINEMA DSP sound field programme, featuring a new sound field processing algorithm that increases the sound source motion tracking and spatial representation power of the latest formats, including 3D surround. It also supports Dolby Atmos and DTS:X playback with CINEMA DSP HD³, taking the surround sound experience to new heights.

YPAO[™]- R.S.C. with Precision EQ and Multi-point measurement

YPAO-R.S.C. analyses the room acoustics and measures various speaker characteristics, then calibrates audio parameters to achieve optimum sound at any of eight listening positions. It uses Precision EQ to provide full-bandwidth 64-bit accuracy, as well as Reflected Sound Control to correct early reflections for studio-quality sound. It also provides DSP Effect Normalisation, which varies the CINEMA DSP parameters according to the reflected sounds.
