

Genos2

YOUR NEXT MASTERPIECE

Pushing the boundaries of Arranger Workstation sound, our new flagship, Genos2, includes the legendary DX7 FM technology, cutting-edge Ambient Drums and Steinberg's acclaimed REvelation Reverb. With Style Dynamics Control you're in charge of the energy and dynamics of all 800 preset Styles, bringing a whole new musical dimension to Style playing. Together with the new brighter, anti-reflective display and Live Control LEDs, the features of Genos2 combine to deliver the richest of musical experiences.

More than 1900 Voices and 800 Styles

With over 1900 of the highest quality Voices and 800 Styles with One Touch Settings covering a vast array of musical genres, you will immediately be inspired to play your favorite songs or even create new musical ideas and compositions. Over 200 Styles are brand new, with all existing Styles being fully upgraded to use new Voices and effects, including FM tone generation and the ability to use Ambient Drums and Style Dynamics Control. The result is a high-end professional production.

One of the most important sounds for any keyboard player is the Piano, so we have not only added new Pianos, but also reprocessed existing Pianos to a much higher quality. The CFX, being Yamaha's flagship grand piano, now has more dynamic layers, 88 keys sampling and double length samples compared to its predecessor. In addition, we can choose from a Character Grand, which is a German 1980s well played-in piano, giving a more edgy yet rounded sound, perfect for Pop and Jazz music. The U1 Upright being Yamaha's top end Upright piano has been tuned to provide a contemporary flavor for modern Pop songs. If it's a more cinematic sound you're looking for, you can try the rich melancholy sound of the new Felt Piano.

S.Art2 Voices remain cutting edge in terms of their playability and realism, providing articulations and legato joins unparalleled in any hardware keyboard instrument. There are even more to choose from in Genos2, covering not only the full orchestral palette but also more ethnic flavors such as Duduk, Shakuhachi and Celtic Flute perfect for Movie scores.

Legendary FM Synthesis

In an Arranger Workstation first, Genos2 features a dual engine tone generator with not only AWM technology but now also FM synthesis.

FM has a rich, dynamic sound and powered Yamaha's legendary DX7, an instrument which defined the sound of the 1980s. The iconic DX7 presets and a range of new, modern FM Voices are integrated into the Styles and One Touch Settings and available to play at the touch of a button, bringing a warm, fresh sound to Genos2.

Ambient Drums

With the new Ambient Drums and using a single Live controller, you can choose anything between a punchy, dry, direct drum sound to a more distant, reflective, ambient room sound, providing endless possibilities for your Style playback. Drums are the backbone of any rhythm section so to have this level of control of the Drum sound will really enhance your playing experience.

Style Dynamics Control

For the first time in an Arranger Workstation the energy and dynamics of all Styles, including User Styles, can be adjusted using a simple Live controller. Whether you want your backing band to play at a soft pianissimo level, a hard fortissimo level or anything in between, the choice is now yours.

REvelation Reverb

Reverb is often overlooked but we experience it around us everyday. In Arranger Workstations, reverb is used on Voices, Styles, MIDI Songs, Multi-Pads and the Mic Input, which is why introducing REvelation Reverb from Steinberg has such a big impact on the sound of Genos2. REvelation is extremely high resolution, resulting in a transparent, natural sound, making it the perfect partner for an Arranger Workstation where the reverb must work across a wide range of Voices, Styles and even vocals.

INTUITIVE

INSPIRING

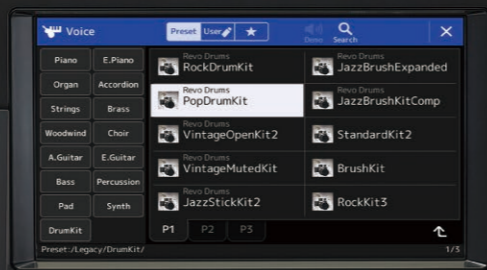

Controllers, now with LEDs

The knobs and sliders are a convenient way to control many aspects of your performance. Genos2's updated Live Control surface now has LEDs to indicate, at a glance, the position of controls, which now also include a 'catch' function, reducing the risk of unintended operation during performance.

Big, bright and clear displays

At the center of Genos2's operation is the large 9-inch touch screen which is now brighter, includes an anti-reflective coating and has been tilted an additional 5 degrees towards the player. Additionally, the sub-display now includes selectable light and dark modes. So whether you're performing indoors, outdoors or under stage lighting, the Genos2 displays will be clearly visible.

Playlist

Playlist is the best way to organize Registration Memory banks into convenient Playlists for instant recall during performance. With the updated user interface, Playlist entries can be sorted A to Z, or Z to A, you can jump alphabetically through Playlist records as well as filter for a specific term in the records. If you are importing MusicFinder records from an older instrument, the Style name will be automatically included in the new Playlist record name.

Vocal Harmony

Vocal Harmony presets, including standard duet, jazzy quartet, big choir and more, can be applied to your voice, adding multiple harmony parts and effects. Be creative with the Synth Vocoder, manipulating synthesized sounds just by singing into a mic. Vocal Harmony gives the performer a wide range of vocal expression and possibilities which can be enjoyed at home or on stage.

Lyrics display

Connect your Genos2 to an external display or TV using the new HDMI port. Perfect if you're entertaining a crowd or hosting a party, you can instantly show the lyrics of your MIDI and Audio songs for everyone to see and sing-along. In addition, you can also mirror the main display or view a musical score, which can be useful if you're playing in a duo or band.

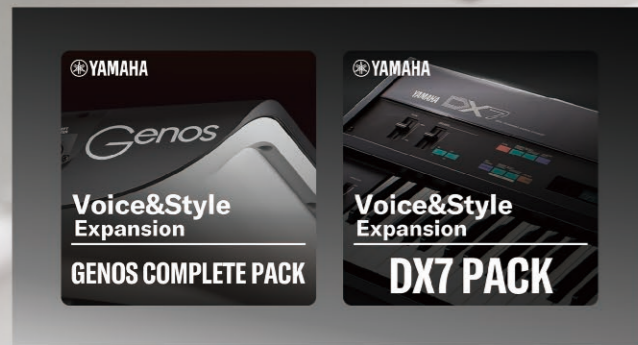

Chord Looper

The new panel buttons provide quick access to recording and playing back chord sequences in realtime. Whether you wish to free up your left hand to play full piano, build up sections of a song or practice a difficult piece of music, the Chord Looper enables you to store up to 8 chord sequences in each bank for easy access during your performance. You can create an unlimited number of banks with your own chord progressions, or choose from a range of built-in presets.

With its powerful Voices, Styles, DSP and functionality, Genos2 is a versatile Arranger Workstation you can rely on whether it's being used at Home, on Stage or in the Studio.

DISCOVER, CREATE, INNOVATE

Premium Pack

Genos2 includes Expansion memory, which means new Voices and Styles can be added in the future. By simply registering your Genos2, you can download the DX7 Pack, which adds to the preset Voices, completing the collection of 128 original Voices from DX7.

In addition to exclusive expansion packs for Genos2, there's already a growing library of free Voice & Style Expansion packs for you to choose from. The packs providing everything from new Voices, Styles, One Touch Settings to Multi-Pads, enabling you to personalize your Genos2's content.

MIDI Song to Style

The magic begins by dragging and dropping your MIDI file into the application. In Easy mode, the conversion to a Style is automatic. Simply save the result and play the Style on your Arranger Workstation.

In Edit mode you can personalize how your Style is created. For example, choose which tracks from the MIDI file should be used in your Style. Specify which regions of the MIDI file are used to make each of the style sections, or even revoice and remix to craft your perfect Style.

The application is free of charge and available for download from www.yamaha.com/2/midisong_to_style

Bluetooth® Audio

With your Bluetooth device connected wirelessly to Genos2, you can enjoy to play along with your favorite songs or even record everything you hear, using the onboard audio recorder.

USB Audio

The new USB Audio Interface allows for studio-quality audio to be recorded using the Rec'n'Share app or any DAW with just a single USB cable. Great for sharing your performance with your friends or for high quality music production.

Panel Controls & Terminals

Top panel

- 1 [b] (Standby/On) switch
- 2 [MASTER VOLUME] dial
- 3 [MIC GAIN] knob
