Restio

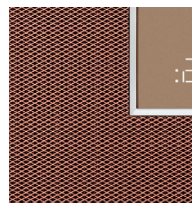

The Art of Sound.

Rest after your day with a new style audio. Entertaining and energising, it's an endlessly enchanting companion. Bluetooth compatibility makes operation and placement smartly convenient. Stylish and wireless – the new Restio.

## Enjoy a Musical Interior

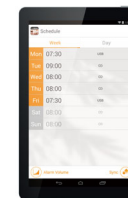

With a sleek stand and minimal proportions, Restio looks like a work of art. It was created by completely re-imagining the concept of a music source as part of the interior. The independent body style makes music an interior design element, and because the sides are slanted, it appears to be a thin panel. The front grille uses expanded metal, providing an attractive texture. The striped pattern printed underneath the grille conveys a feeling of depth, giving the impression that the music is coming from within the entire front surface. Merging beautifully into the living space, this is an entirely new audio form that you can match to your lifestyle.

## Freedom of Movement and Use

Built-in Bluetooth® means that you can enjoy all the music from your iPhone, Android or Tablets wirelessly. Put your Restio wherever you want it, and use your smartphone as you usually do to operate the playback functions. In addition to operating the system, you can use Yamaha's DTA Controller app to set the alarm time for each day of the week individually, as well as make detailed IntelliAlarm settings. If you have an NFC-compatible device, simply hold it near the Restio, and the device syncs automatically. No annoying pairing settings to make—just a one-touch operation to connect or disconnect.

### Minimal Design Allows Flexible Placement

With a 9cm body and a half-moon shaped stand, you can position Restio right up against a wall. What's more, the standalone style doesn't require a shelf, so there are no restrictions on where you can put it. You can even remove the stand and hang it on a wall (requires an optional bracket AT-800). It's the perfect way to match your music source to any room's decor.

### Sound That Lets You Appreciate Music

Restio is designed for premium quality sound from a wide range of input sources, including Bluetooth, CD, Radio, USB and AUX input. A two-way, four-speaker system finely tuned to HiFi audio standards delivers powerful, expansive bass and crisp, precisely contoured treble. It also features a three-band equaliser, so you can adjust the sound to match your own preferences.

### Time – Artistically Displayed

The stylish digital clock gives you a choice of two patterns: the usual number display and a unique display that combines numbers and an indicator. An auto dimmer function adjusts the brightness of the display to match the brightness of the room. It also features Yamaha's IntelliAlarm, which first gently plays the music of your choice and then beeps to ensure that you are fully awake.

Clock showing 10:25.  
The indicator is in the hour position, the numbers show the minutes

## Product Concept

We designed the Restio to be not just an audio system, but rather as an integral part of your room's interior, as like a sofa, table or an art frame. That reflects our desire as a musical instrument maker to see music become a more intimate companion of people, at their side during their daily lives. Even when the goal is to bring HiFi quality sound to your living room, the Restio seeks to remain unobtrusive and understated. Focusing on space and the people who live in it, we explored the vision for the product from all angles before arriving at a square art frame-style design supported on a slim, stylish stand.

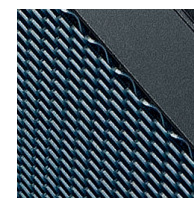

With a 9cm-thin body and a half-moon shaped stand base, you can position Restio right up against a wall. So the unit makes minimal demands on your living space. Maximum flexibility in placement has been achieved by also including a wall-hanging option.

Relax and enjoy music from an audio system that has truly become part of your interior decor.

---

### Expanded Metal

The use of expanded metal with a weave-like three-dimensional pattern evokes the natural texture of cloth. This maintains audio performance while blending in well with the interior.

---

### Front panel

The front panel display uses glass, a material often incorporated into interiors. The frame has a textured aluminum coating with a pitch accuracy of 0.2 mm creating an exquisitely stylish finish.

## Choice of four colours

Brick

Black

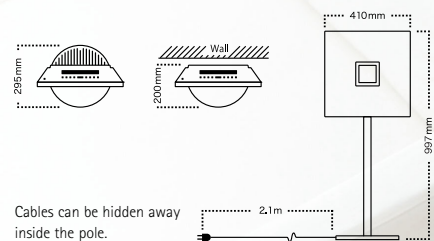

White

Dark Blue

### Main Specifications
